CSci 1103 - Lab 1

Click this icon to open a terminal (or press Ctrl+Alt+T):

Then type in: netbeans
... and hit enter. This should load up netbeans for coding. (Remember to make a “new project” for each problem.)

1. Write a piece of code that says you are writing Java code:

Example output:
James and his partner Bob are writing Java code!
TA's check us off!

2. Modify assignment 1 (or create a new project) that displays the same output, but uses System.out.print instead of System.out.println (no “ln”). You may not use any more spaces than assignment 1.

3. Make a picture from the text in Java, below are a few examples. If you are feeling terribly uncreative, google “ascii art”

Example output 1 (stick person):

```
  O
 /|
 / \
```

Example output 2 (tree... maybe?):

```
  ooo0
  ooooo0
  ooooo0
  ooo00
    ||
    ||
   //\``
