Spring 18: CSci 8002—Introduction to Research in Computer Science–II

Guidelines for Guest Lecture Summary

Due: Mar. 23 (beginning of class) for one guest lecture from Feb. 02, Feb. 16, or Feb. 23.

The goal of the guest lectures is to introduce you to the wide range of research going on in our department. You should summarize one of the Spring 2018 lectures listed above.

Your summary should contain the following components:

- The title and speaker name for the lecture that you are summarizing
- An overview of what the speaker presented
- A discussion of what you have learned from the lecture
- An outline of some possible directions for further research

Your summary should show that you have attended and understood the lecture and that you have subsequently reflected upon what was presented. It should be in your own words, and not a verbatim recitation of text from the associated readings. Strike a reasonable balance between being overly technical and being superficial in your treatment of the subject matter.

Deliverable: Please submit a typed, stapled hardcopy of your summary (1-inch margins, 11- or 12-point font, single-spaced, single-column). Include a separate cover page, with your name, student ID#, and advisor name (if known). Proofread your document.

Page limit: 2 pages.
