CSci 4511W: Artificial Intelligence

Schedule*

This is an approximate schedule. It will be updated as the class progresses.

Week	Week Of	Topics	Lecture Materials	Readings	Exams	Due
1	Jan. 20	Introduction: HI!	1/22	Ch. 1-2		
2	Jan. 27	Agents, Problem Solving and Search		Ch. 2-3		
3	Feb. 3	Search		Ch. 3-4		HW 1, Monday Feb. 3 at 11:55 P.M.
4	Feb. 10	Search and Heuristics		Ch. 4		Writing 1, Monday Feb. 10 at 11:55 P.M.
5	Feb. 17	Local Search and Game Playing		Ch. 5		HW 2, Monday Feb. 17 at 11:55 P.M.
6	Feb. 24	Game Playing		Ch. 5	Midterm 1, Monday Feb. 24	
7	March 2	Game Theory		Ch. 17.5		Writing 2, Monday March 2 at 11:55 P.M.
	March 9	Spring Break				
8	March 16	Constraint Satisfaction		Ch. 6		HW 3, Monday March 16 at 11:55 P.M.
9	March 23	Propositional Logic		Ch. 8		Writing 3, Monday March 23 at 11:55 P.M.
10	March 30	First Order Logic		Ch. 9		HW 4, Tuesday Monday March 30 at 11:55 P.M.
11	April 6				Midterm 2, Monday	

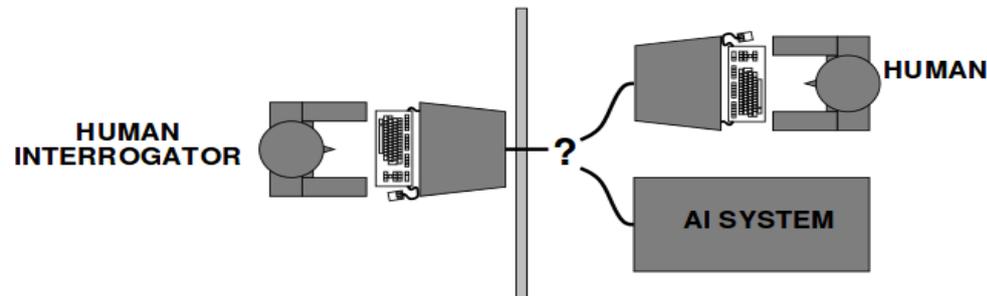

Don't like my slides? (tough)

Acting humanly: The Turing test

Turing (1950) "Computing machinery and intelligence":

- ◇ "Can machines think?" → "Can machines behave intelligently?"
- ◇ Operational test for intelligent behavior: the **Imitation Game**

- ◇ Predicted that by 2000, a machine might have a 30% chance of fooling a lay person for 5 minutes
- ◇ Anticipated all major arguments against AI in following 50 years
- ◇ Suggested major components of AI: knowledge, reasoning, language understanding, learning

Problem: Turing test is not **reproducible**, **constructive**, or amenable to **mathematical analysis**

Prerequisites

1. Competent programmer and understand big-O
2. Understanding of data structures (graphs and trees)
3. Basic knowledge of formal logic (truth tables, boolean ops)

Syllabus

- 30% Homework (-15% per day late)
- 20% Writing assignments (-15% pdl)
- 15% Project
- 10% Midterm (Monday Feb. 24)
- 10% Midterm 2 (Monday April 6)
- 15% Final (Wednesday May 13,
1:30-3:30pm in this room)
- 3% Extra credit in-class activities

Homework

Homework and written assignments are individual assessments (unless explicitly stated otherwise)

Please ensure the work you turn in is your own

Writing assignments

The writing assignments will use Latex
(down with docx!)

The first few will be reviews of related topics
and the last couple will tie into the project

These can be resubmitted within two weeks
of being returned for another regrade (once)

Exams

All exams are open book/notes
(most people think they are hard)

You can use an electronic device if
you want on exams, but no:

- phones
- internet
- running code (ish)

Syllabus

Grading scale:	77% C+
93% A	73% C
90% A-	70% C-
87% B+	67% D+
83% B	60% D
80% B-	Below F

Schedule

Week 1-4, Ch 1-4 - Intro & Search

Week 5-6, Ch 5, 17.5 - Game playing

Week 7-11, Ch 6-9 - Logic

Week 12-14, Ch 10, 12 - Planning

Week 15 - Special topics

There will be one assignment (or exam) every week (first assignment due Feb. 3)

Project

The project will be a large part of the class and should be about 10-12 pages and include:

- Title, authors, abstract
- Introduction & problem description (1-2 pg)
- Literature review (2-3 pages)
- Description of your approach (2-3 pages)
- Analysis of results (1-2 pages)
- Conclusion and summary
- Bibliography

Project

You may work on the project with partner, but we will expect higher quality of work

If you form a group, you must also submit a the specific contributions of each member

The project should reflect about 50 hours of work per person (including reading, programing and writing)

Project

You pick the project, but must use knowledge representation (something interesting)

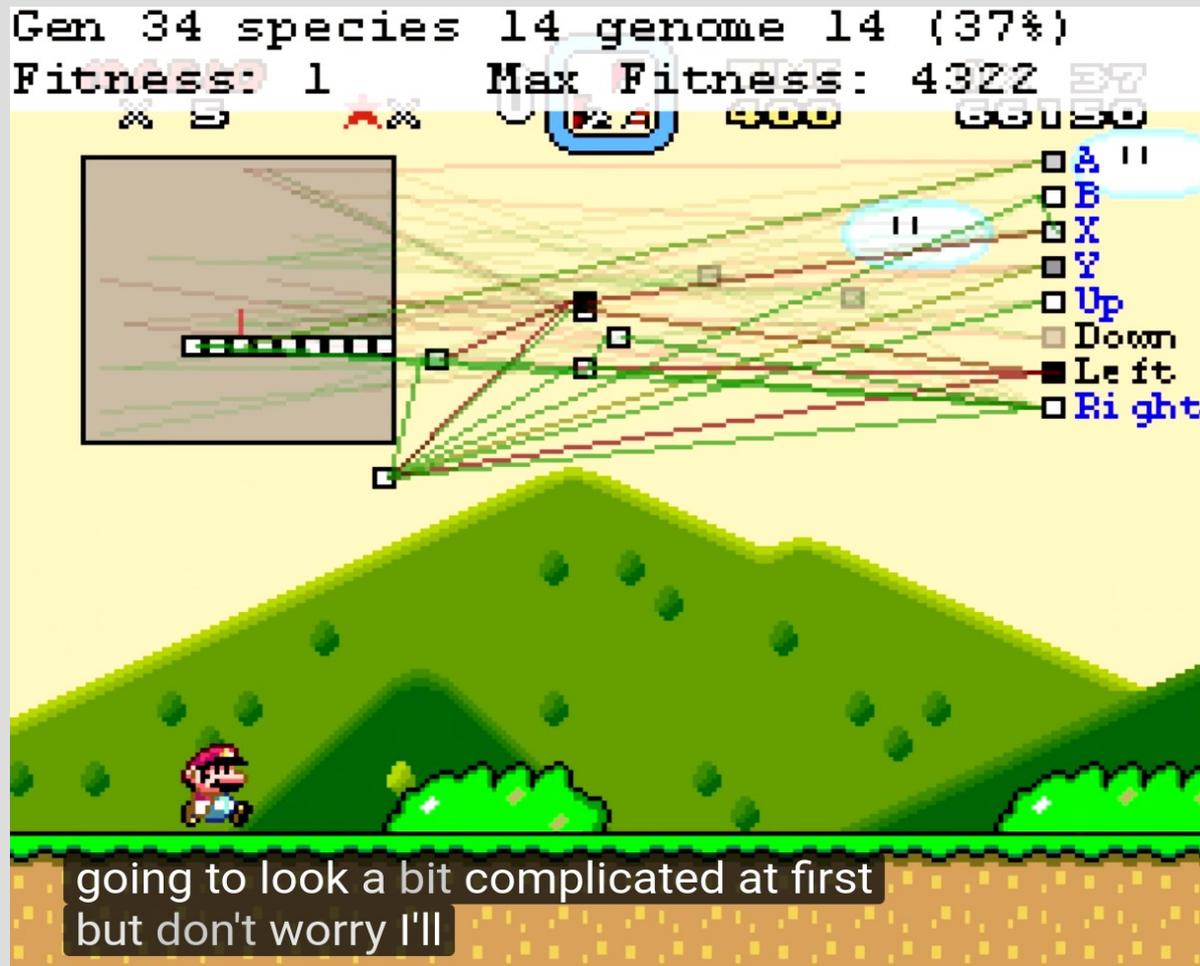

Some ideas:

- AI for a game (3D tic-tac-toe, board games...)
- Spam filter (naive Bayes probability)
- Use A^* to plan paths around Minneapolis
- Agent behavior in a system (evacuation or disaster rescue)
- Planning (snail-mail delivery, TSP)

Project

Mario?

Syllabus

Any questions?

Artificial Intelligence

CAN'T WE JUST USE ARTIFICIAL INTELLIGENCE TO MANAGE OUR SALES FUNNEL FOR US?

I FOUND FOUR PLACES THAT SELL FUNNEL CAKES FAIRLY CLOSE TO YOU.

TOM
FISH
BURNE

Agent/robot

Let's start by defining what we mean by artificial (i.e. robot)

For our purpose, a robot/agent:

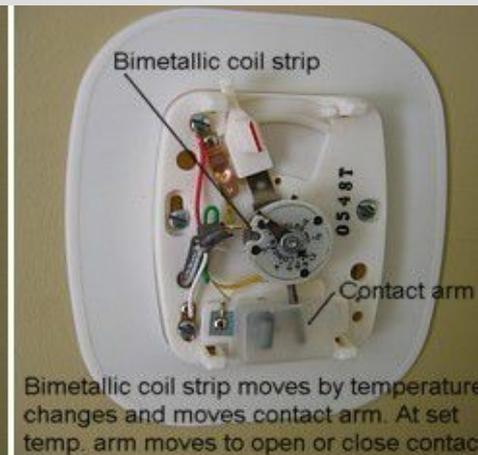

- Perceives the environment
- Pursues a goal
- Can manipulate/affect environment

Agent/robot

Is this a robot?

.... How about this?

Intelligence

What is intelligence?

Intelligence

What is intelligence?

-No convenient definition

What is rational?

Intelligence

What is intelligence?

-No convenient definition

What is rational?

-Acts on knowledge to achieve “best outcome”

Rationality

Thus a rational agent acts to achieve the best outcome or goal (or best in expectation with uncertainty)

A limitedly rational agent makes the best choice with limited computation (also called online algorithms)

Rationality

Often times, fully exploring all the options is too costly (takes forever)

Chess: 10^{47} states (tree about 10^{123})

Go: 10^{171} states (tree about 10^{360})

At 1 million states per second...

Chess: 10^{109} years

Go: 10^{346} years

Turing Test

For a long time, the Turing Test was a supposed indication of intelligence

A person would question two entities and have to determine which one is the computer and human

This is not very popular anymore

Turing Test

To pass the Turing Test, a computer needs the following:

- Natural language processing (as the test is written and not verbal)
- Knowledge representation (storage)
- Reasoning (logical conclusions)
- Machine Learning (extrapolation)

Turing Test

THINK

ΣΚΕΨΟΥ

DENKE

PENSER

\$3,400

\$4,400

\$1,200

KEN

WATSON

BRAD

Purple	98%
Barnaby	20%
Where the Wild Things Are	12%

AI

Simple computers have been built for hundreds of years

For artificial intelligence to mature, it needed to borrow from other fields:

Math - logic and proofs

Statistics - probability

Economics - utility

AI

Self driving cars

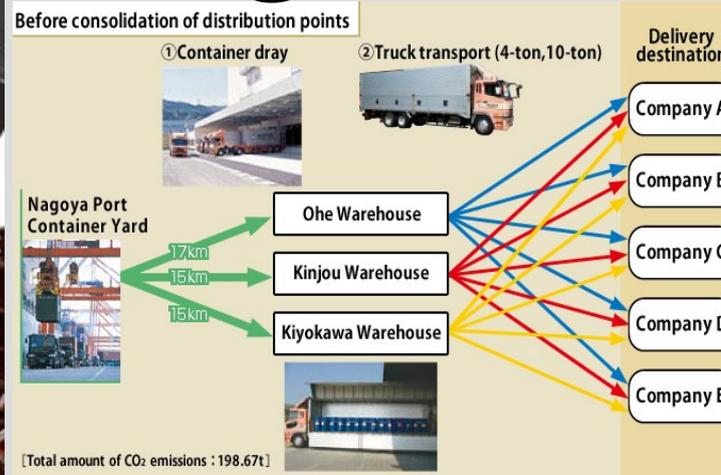

Speech recognition

Game playing

Logistics

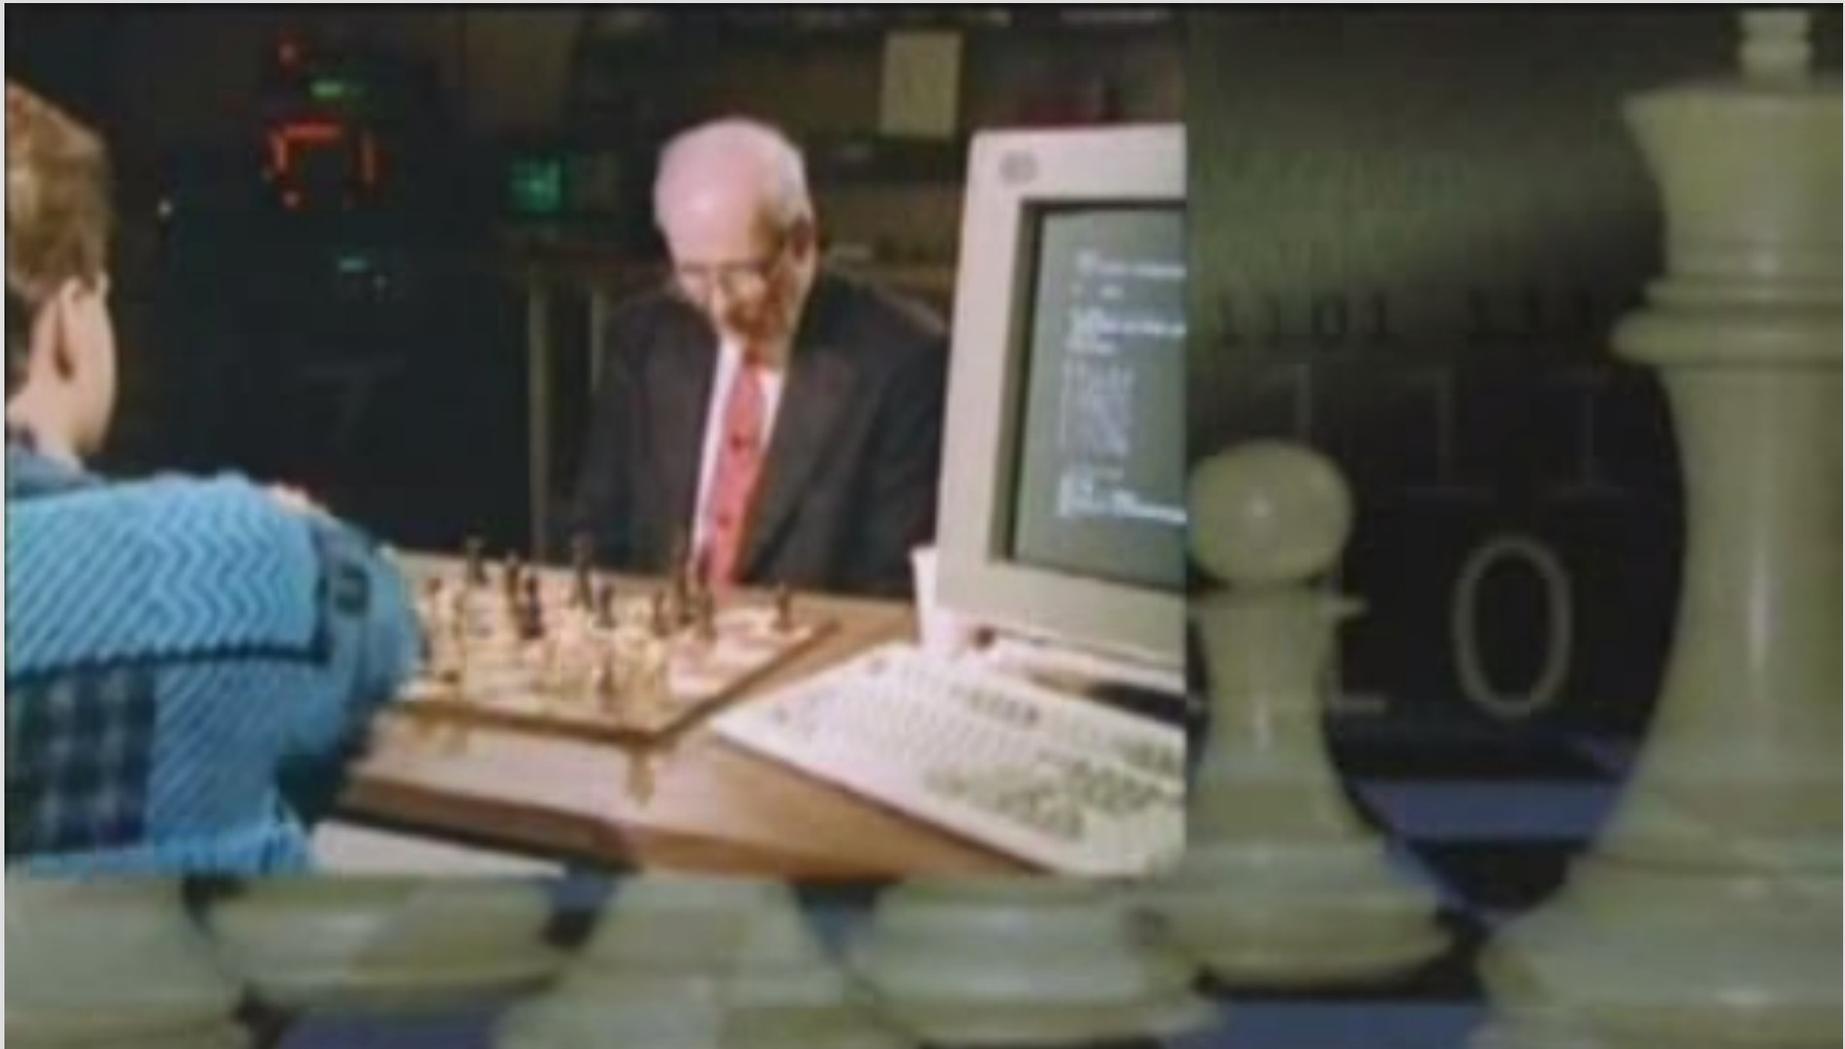

Spam filter

AI - Chess

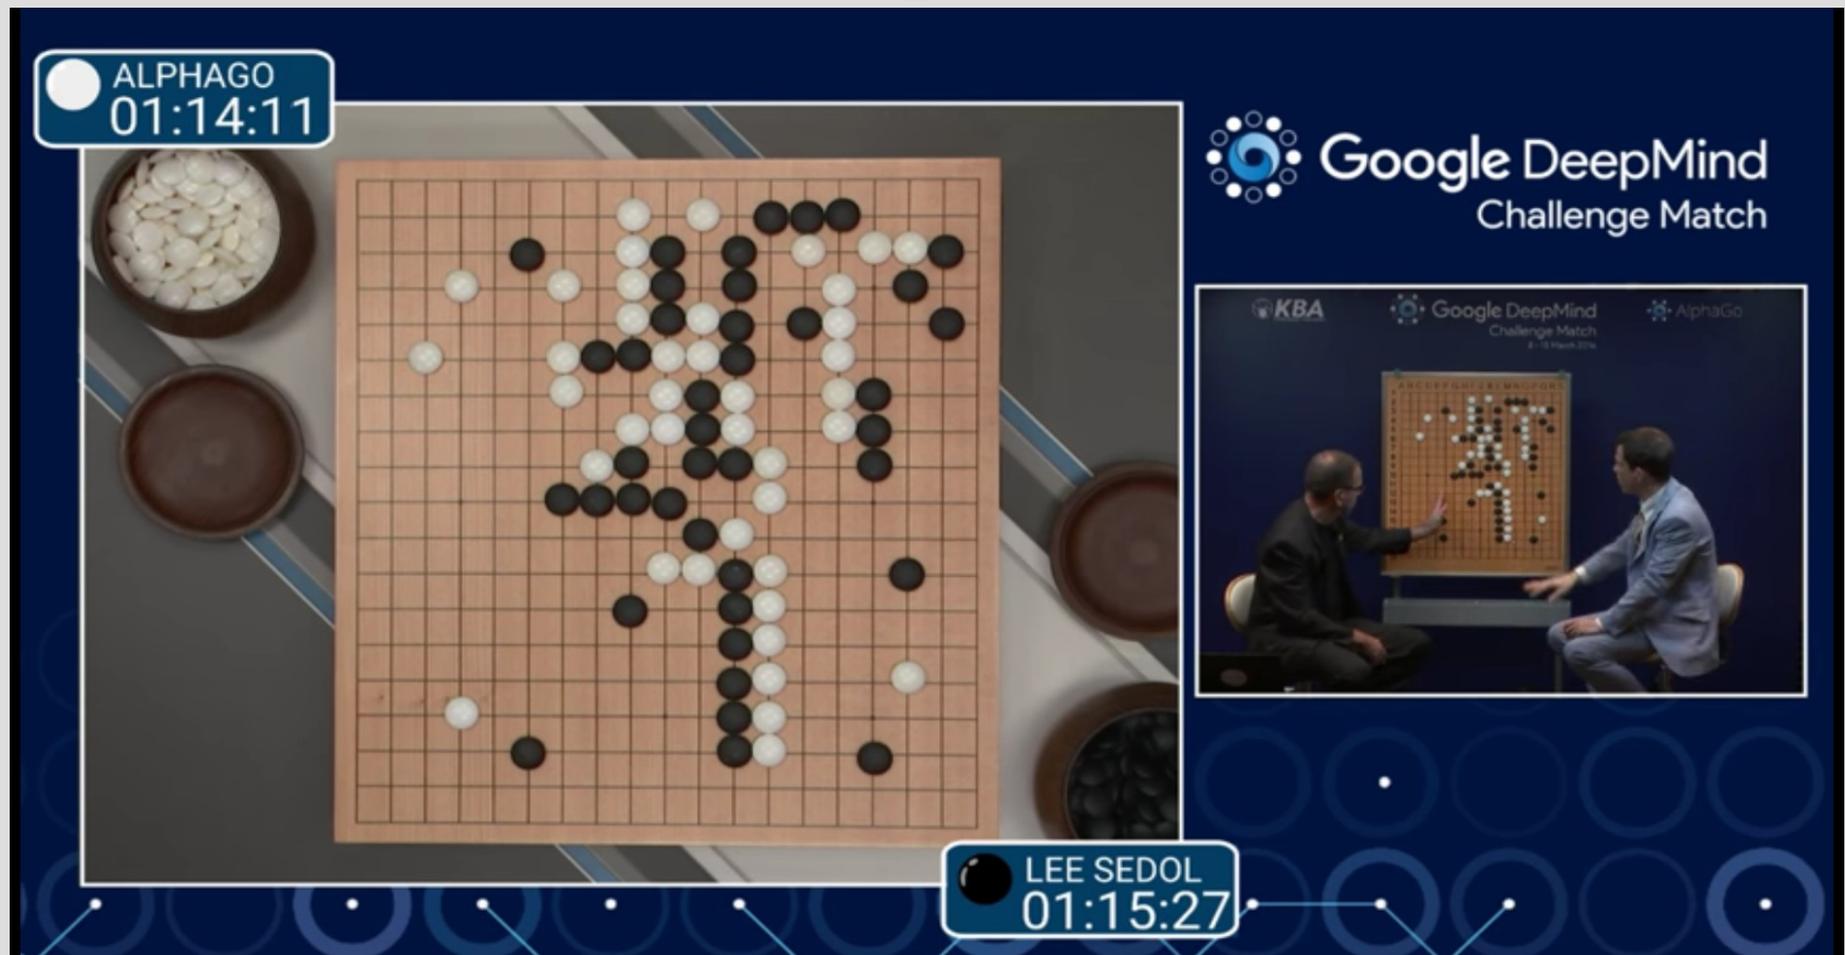

Spring 1997 - Deep(er) Blue (CMU / IBM)

AI - Go

Spring 2016 - AlphaGo (Google)

December 2017- AlphaZero

AI - Dota2

August 2017 - OpenAI (Elon Musk)
